

GSM Interface Dialler Module

Connecting Home Security to Mobile Phones

Get a text message on your mobile phone when an intruder enters your home

£175

The Textlink GSM Interface module is designed to keep you in constant contact with your Home Alarm System. Communicates directly with your Mobile Phone.

In the event that an intruder attempts to break-in to your home, no matter where you are in the world, you will receive an instant text warning message on your mobile phone "Home Alarm Activated"

Complete with an internal O2 Pay as You Go sim card fitted and with £10.00 of credit. A top-up card is provided to add more credit.

Now available with 2 output lines to send the alarm message to. Program from your mobile a second landline or any other mobile phone number.

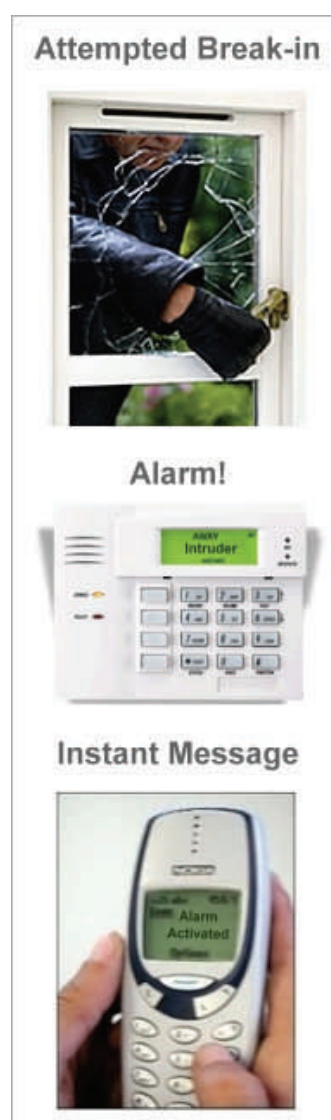

Installed in minutes : Easy to program

- Only cost the price of a mobile text message: 10 pence
- **NO Hidden Charges**
- **NO Monthly Subscriptions**
- **NO Registration Fees**
- **NO Contracts to Pay**

Features:

- The module will send a text warning message to any mobile or landline phone should an alarm condition occur.
- The module can be installed in a matter of minutes and is easily programmable from any mobile phone.
- Compatible with any standard make and model of security control panel or any similar battery security device.

Also available with an on-board rechargeable battery back-up supply that can operate for up to 7 days without a power source. Visit the Textlink website for more information: www.text-link.co.uk

Why pay hefty monthly fees for 24 hour monitoring when you can do it yourself for the price of a text message

The Textlink GSM Interface Module is a fully pre-programmed wireless network dialler module that links your home alarm security system or similar product directly to your mobile phone with no telephone landline or 24 hour monitoring service installation being required. NO subscription contract or monthly charges apply.

In the event of an attempted break-in and your home security system is activated by an intruder the GSM Interface module, no matter where you are in the world, will send an instant text warning message to your mobile phone, or any other mobile phone of your choice notifying you of the alarm condition. **"Home Alarm Activated"** The user may then decide on the appropriate action to take. i.e. call the police, contact a neighbour etc..

The cost to the user when an alarm condition occurs is exactly the same price as with a mobile text message, **10 pence** which is deducted from the GSM modules internal Pay as You Go SIM card. The GSM module comes supplied with **£10.00** of credit which is enough for 100 alarm conditions. A Top-Up card is also supplied should the user ever need to add credit to the modules internal sim card. The balance remaining will be displayed on your mobile phone with every text message.

The GSM Interface Module can be installed in minutes and can be fitted internally into any standard home alarm system panel. If your home security system was installed by an alarm installer, please contact them for installation of this product. If you are fitting a new security system to your home, ask your installer to quote you including a Textlink GSM Interface Module.

The module can be supplied with or without full rechargeable battery back up batteries which will last for up to 7 days in the event of a power failure.

The module can be programmed to send the text alarm warning message to a second landline or mobile phone number.

The GSM Interface module operates from an internal PAYG sim card supplied, fitted and with **£10.00 off credit**, and at only **£175.00 + Vat** makes it one of the most flexible and competitive alarm to mobile phone communication security devices on the market today.
